

## HID Global and Genetec showcase latest Private and Luxury Security Solutions at Platinum Security Exhibition 2019 in Monaco

**Monaco, France April 1, 2019 (Booth B19)** – HID Global, a worldwide leader in trusted identity solutions, and Genetec™, a leading security technology provider, will co-present security, access control and brand protection solutions at Platinum Security Exhibition 2019, Monaco, from 10-11 April. The international event focuses on private security for individuals, events and luxury retailers. Together, HID Global and Genetec will showcase joint solutions including Seos and Mobile Access that protect people, places and goods.

“Security solutions employed by organizations worldwide are now being used by people to protect their privacy and high-value items, such as homes, transport or luxury goods,” said **Stephan Mangin**, Area Sales Manager France, Switzerland & Monaco, Physical Access Control. “People are looking for solutions that offer security while being easy-to-use. The combination of security solutions with smartphone or tablet apps makes them an obvious and more attractive choice for individuals that need to build a personal and private security system.”

At the Platinum Security Exhibition 2019, HID Global and Genetec will show:

- **[HID Mobile Access®](#), powered by Seos® credential technology** enables people to secure access to places and use their smartphone, tablet or wearable to access doors, gates and more. This greatly improves user convenience in today’s mobile-first world and provides a modern and professional solution.

HID Mobile Access, which leverages Seos® as its underlying credential technology, offers these key benefits:

- **Convenience:** Using a mobile device instead of a security card to access buildings and places. Highly intuitive “Tap” and “Twist and Go” gestures make it easy
- **Efficient and Effective:** An online management portal makes it simple to create, manage, issue and revoke credentials through the cloud, scaling access up or down in response to changing needs
- **Higher Security:** HID Mobile Access is delivered through a highly secure and reliable cloud platform that is backed with a service level agreement of at least 99.5% service availability, demonstrating HID Global’s commitment for uptime and connectivity. Importantly, the use of Seos credential technology enables higher security because it follows best practices in data integrity to bind each mobile ID to the device and protect the data at rest and in motion
